# BST Connect™ Overview

BST Connect™ is our subscription-based iPaaS solution in Microsoft Azure that allows data to be shared between BST11 solutions and other critical business systems, providing a seamlessly integrated experience and improving process efficiency.

With standard and premium offerings available, BST Connect gives your team the tools to thrive by creating a smarter, more connected way of working.

Standard

BST Connect's standard offering lets citizen and professional developers* automate business processes and create tailored user experiences and process flows.

Premium

BST Connect's premium offering gives professional developers a broader set of tools to create a more tailored and seamless experience across business systems.

BST Connect™ Features

BST11 Connectors

Our connectors for Microsoft Power Apps and Power Automate let users develop, automate, and connect low-code/no-code solutions with BST11 documents and workflow events. Our premium offering also gives professional developers added flexibility through the BST11 Connector for Azure Logic Apps.

Integration REST API

Both the standard and premium offerings include BST Connect's Integration REST API, which provides professional developers with bi-directional read-and-write integration and interoperability with BST11 documents.

Webhooks

With the premium offering, professional developers can subscribe to and receive real-time webhook notifications for BST11 workflow events.

Azure Service Bus

BST Connect's premium offering also allows professional developers to subscribe to and receive real-time Azure Service Bus topic notifications for BST11 workflow events.

*Citizen developers lack formal training in professional development but have the skills to create simple business applications and solutions using low-code or no-code platforms. Professional developers have extensive, formal knowledge of coding languages to build, maintain and enhance software applications for commercial use.

BST Connect™ Benefits

✓ Automate business processes and drive operational efficiency using our BST11 Connectors

✓ Use BST Connect triggers to start automated processes in near-real time, including alerts and notifications via email and SMS whenever BST11 workflow events occur

✓ Facilitate and orchestrate process automation between BST11 and other systems through BST Connect actions and triggers

✓ Reduce operational costs by accelerating project delivery and eliminating redundant data entry, correction and rework

About BST Global

BST Global designs, develops and deploys the AEC industry's first suite of AI-powered project intelligence™ solutions specifically for the world's leading architects, engineers and consultancies.
