

BST Global's Integration Solution

BST Connect is our subscription-based iPaaS solution that allows data to be shared between BSTII solutions and other critical business systems, providing a seamlessly integrated experience and improving processes.

With standard and premium offerings available, BST Connect gives your team the tools to thrive by creating a smarter, more connected way of working.

Standard

BST Connect's standard offering lets citizen and professional developers* automate business processes and create tailored user experiences and process flows.

Premium

BST Connect's premium offering gives professional developers a broader set of tools to create a more tailored and seamless experience across business systems.

BST Connect Features

BSTII Azure Connector

BST Connect lets users connect, automate, and develop low-code/no-code solutions with BSTII Documents and Workflow Events using Power Apps and Power Automate. Our premium offering also allows professional developers to use Microsoft Logic Apps for added flexibility.

Integration REST API

BST Connect's standard offering allows users to integrate with BSTII Documents using REST API.

Webhooks

With the premium offering, professional developers can subscribe to BSTII Workflow Events using industry-standard webhooks.

Azure Service Bus

Professional developers can also subscribe to BSTII Workflow Events using Azure Service Bus through BST Connect's premium offering.

*Citizen developers lack formal training in professional development but have the skills to create simple business applications and solutions using low-code or no-code platforms. Professional developers have extensive, formal knowledge of coding languages to build, maintain and enhance software applications for commercial use.

BST Connect is going to give firms the ability to connect many of their business systems to BSTII much more easily. It's going to leverage Power Automate and Power Apps, all of the Microsoft suite, to drive efficiency in the business.

– Barry Lawrence, Product Director, Platform & Integration

BST Connect Benefit

- ✓ Automate business processes and drive operational efficiency using the BSTII Azure Connector
- ✓ Use BST Connect triggers to start automated processes in near-real time, including alerts and notifications via email and SMS whenever BSTII workflow events occur
- ✓ Facilitate and orchestrate process automation between BSTII and other systems through BST Connect actions and triggers
- ✓ Reduce operational costs by accelerating project delivery and eliminating redundant data entry, correction and rework

About BST Global

BST Global designs, develops and deploys the AEC industry's first suite of AI-powered project intelligence™ solutions specifically for the world's leading architects, engineers and consultancies.
